**Wasatch Computer Technology LLC  
Releases Wasatch SoftRIP Version 6.3**

*January 28, 2008 – Salt Lake City, UT* – Wasatch Computer Technology has jumped ahead of the competition again with Version 6.3 of Wasatch SoftRIP, its industry-leading RIP and Print Management software. New features include a powerful Template Creator that defines layout image place holders for repeatable placement and sizing; Database Tools to import industry-standard or user-defined spot color matching tables; Halftoning Innovations; and a RIP-to-TIF generic printer driver. Also included are new printer drivers for devices from Mutoh and US Sublimation. Wasatch will be demonstrating Version 6.3 at the upcoming ISA, FESPA, and DRUPA tradeshows.

**SoftRIP Templates**

SoftRIP Templates save hours of prep time for users with standardized output sizes and placement needs. The template interface includes tools for specifying image location, alignment, and scaling attributes. Simply apply the template to a new layout to drag and drop images straight to their desired location.

The template building toolset streamlines printing for workflows that demand consistent image placement and sizing. Key uses of SoftRIP Templates include T-shirt printing, flatbed printing, and a wide variety of industrial printing applications.

**Spot Color Database Import**

This release provides spot color database import tools for matching hues in industry-standard swatch books or key customer data files. SoftRIP Version 6.3 imports databases based on Microsoft Excel files or any other comma delimited data format. To suit various types of color databases, values can be entered using the more accurate 0-255 interval or a standard 0-100 percentage.

**Halftoning Introductions**

SoftRIP version 6.3 includes new halftoning refinements to serve growing market niches. Version 6.3 optimizes quality specifically for the newest generation grayscale print heads. In the flexography market niche, Wasatch's halftone refinements will revolutionize the adoption of inkjet separations. New flexo halftone options are available exclusively in SoftRIP SP for Separations Printing.

**About Wasatch Computer Technology**

Wasatch Computer Technology, LLC, headquartered in Salt Lake City, is a leading developer of RIP and print management solutions for wide-format digital printing, screen separations, photographic, gicleé and other specialized processes in the digital printing markets.
